
Hollow = teacher, solid = head; circle = train states, square = held-out (5-fold); live shaded. Offline: first five SFT proposals per state, held-out rollouts 4–8; Oracle = best action on rollouts 1–3; offline heads average 3 seeds, the live head is seed 0. Bars: 95% intervals (task-clustered bootstrap offline, paired over tasks live). Each point is relative to one SFT sample on its own states or tasks (train 39.6%, held-out 38.8%, live task-weighted 41.4%).
